1975 Billco Glass Washer 84"

- 208 Volt 3 Phase
- 135 Amp
- Serial – 7599
- 6 Brushes (3 pair)
- 4 air knives (2 pair)
- 4 foot entry/exit conveyors
- 2-20KW Watlow water heaters in hot water tank (will maintain 145*)
- Brand new Low-e brushes on top brushes (December 2025)
- Bottom brush bearings checked (December 2025)
- All new top brush bearings (December 2025)
- Hydraulic lift for top section of the machine
- PLC controlled “water saver” feature for final rinse – we set this feature up ourselves and programmed the PLC. It has eyes on the entry and exit conveyor and detects when the glass enters the washer and will turn on the final rinse water on the 3rd set of brushes for the duration that the glass is present in that area. It is also programmed to turn the conveyor off to keep the leading edge of the glass from going past the end of the exit conveyor. There are manual override buttons for the conveyor as well. The PLC programming files are on file and will be supplied with the machine.
- Camera to allow operator feeding the washer to easily see the exit end of the conveyor
- Main frame is still in good condition
- Steel gears for brushes and rollers
- This washer did have a Prestik control panel installed on it at some point it would appear like (or a Prestik sticker applied to the control panel?) it has been that way for as long as we have had it...
- We have owned and operated the machine for 14 years – it is still a very solid machine despite its age!
- We are also including the 3 old brushes that we just replaced as “cores” that could be re-bristled
- Also included are 2 new brushes
- We also have a Thormag 45KVA 3 Phase step down transformer (480V-230V) that we will include in case needed. (1700.00 value based on used transformers online)

-
- Still in use and can be watched in operation
 - Available end of first quarter 2026
 - Reason for selling – we are going to a vertical washer

Complete Package – only \$34,900.00
